#### Precautions for use :

- 1. Customer must apply the current limiting resistor in the circuit so as to drive the LEDs within the rated current. Otherwise slight voltage shift maybe will cause big current change and burn out will happen.
- 2. Also, caution should be taken not to overload the LEDs with instantaneous high voltage at the turning ON and OFF of the circuit.
- 3. Storage:
- 3.1 Don't open the moisture proof bag before ready to use the LEDs.
- 3.2 The LEDs should be kept at 30°C or less and 60%RH or less before opening the

package.

The max. storage period before opening the package is 1 year.

3.3 After opening the package, the LEDs should be kept at 30℃/35%RH or less, and it

should

be used within 7 days.

3.4 If the LEDs be kept over the conditions of 3.4, baking is required before mounting.

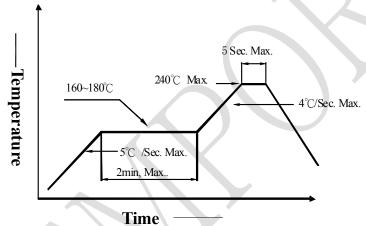

Baking

condition as below:  $60\pm5^{\circ}$ C for 12 hrs.

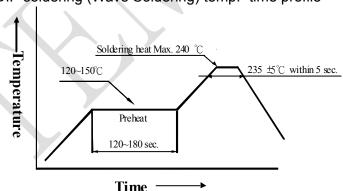

- 4. Soldering condition:
  - 4.1 Manual of soldering:

The temp. of the iron should be lower than 260°C and soldering within 3sec per solder-pad is to be observed.

4.2 Pb-free solder temp. -time profile

4.3 DIP soldering (Wave Soldering) temp. -time profile

#### Note:

- a) Reflow soldering should not be done more than two times.
- b) Don't put stress on the LEDs when soldering.
- c) Don't warp the circuit board before it have been returned to normal ambient conditions after soldering.

## Tape and Packaging

1 \ Tape leader and reel (1000±3 pcs/Reel)

#### 2 · Packing

#### 3 · Storage:

- 1) Don't open the moisture proof bag before the products are ready to use •
- 2) Before opening the packing, the LED should be kept at 30°C or less and 90RH or less
- 3) After opening the moisture proof bag, should use the LED immediately, do not expose the led in air for a week.
- 4) If the LEDs exceed the storage time or the moisture absorbability material has faded away, Backing treatment should be performed using the following conditions: 60+/-5°C for 24 hours.
